Checklist for Space Command Predictive Avoidance

APOLLO Procedural Checklist

This checklist describes the second half of the interface, relevant to the day before activity and the time of the activity itself.

- Verify receipt of e-mail from Space Command (usually by mid-day)

- Verify readable format (text)

- Save attachments to local computer

- Rename files `moon.blk`, `80.blk`, `45.blk` corresponding to the target

- Verify that target specified in file matches filename

- Copy `.blk` files to `houston`'s `/home/apollo/daily/` directory

- On `houston`, copy `moon.blk` to `housctl.blk`, the default block file

- If slewing to one of the test targets, copy the appropriate file to `housctl.blk`

- Verify appropriate filename in TUI window

- If **accidental propagation should occur**, call **719.474.4407** or **719.474.4401** after normal business hours, and 719.474.4496 or 719.474.4497 or 719.474.4416 during normal business hours
